

▶ ABOUT AMRI

Founded in 1991 as Albany Molecular Research, Inc., AMRI's (NASDAQ: AMRI) core business consists of a fee-for-service contract services platform encompassing drug discovery, development and manufacturing; and an independent R&D division comprising proprietary technologies, internal drug discovery and bundled capabilities designed for more collaborative relationships and licensing opportunities. With locations in the U.S., Europe and Asia, AMRI provides customers with a flexible range of services and cost models.

CONTRACT SERVICES PLATFORM

As the only fully integrated, global contract drug discovery and chemistry services provider, AMRI has unparalleled experience, capacity and flexibility to support clients' needs. From the identification of lead compounds via biological screening, through lead optimization chemistry, all the way to drug manufacture, AMRI continues to be the partner of choice for hundreds of leading pharmaceutical, biotechnology and agribusiness companies. Moreover, AMRI has the

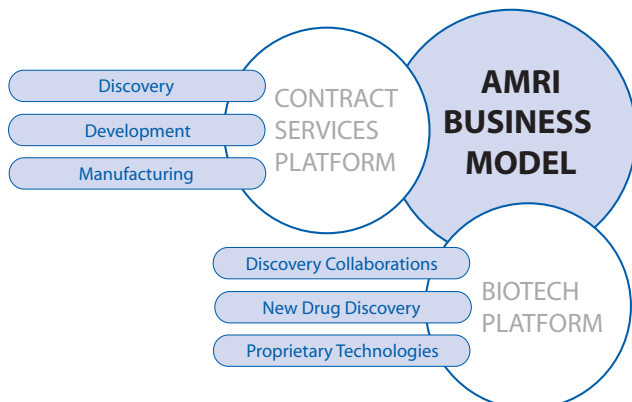

ability to bundle all of its integrated technologies to meet customer needs.

BIOTECH/DISCOVERY PLATFORM

As an additional, more value added service for our clients, AMRI also conducts its own proprietary research, with the goal of developing preclinical or clinical drug candidates, then licensing them to a commercialization partner with the capability to bring a drug to market. AMRI's biotech platform provides customers with opportunities for in-licensing later-stage candidates. Additionally, AMRI's proprietary research encompasses strategic collaborations with partners in which each organization shares in appropriate risk-reward considerations, particularly with companies whose target validation and biological capabilities complement AMRI's lead-finding and medicinal chemistry capabilities.

GLOBAL FACILITIES

AMRI's state-of-the-art facilities are located in key geographic regions, facilitating the recruitment of top-quality scientists and providing easy access for customers. Plus, working with AMRI is easy. We offer a flexible range of cost structures and manage project logistics at all of our globally integrated sites.

AMRI is led by a management team with extensive industry experience. In addition, AMRI has leadership teams focused in a number of core areas: chemistry services, proprietary R&D, quality and regulatory affairs, as well as manufacturing. Each of these areas is led by industry veterans, along with a core nucleus of scientists.
